FOURTEEN YEARS OF SUFFERING.

MRS. SHEPHERD'S EXPERIENCE IN THE UNITED STATES AND CANADA.

A letter was received at this office a week or more ago, says the Detroit News, which contained statements of a positive and surprising nature that it was thought best to make a thorough investigation before publishing it.

The writer of the letter is Mrs. S. Shepherd, who now lives at Elkton, Mich., but whose home was for nearly twenty years in the village of Detroit, Ontario.

A thorough investigation has been made, and it can be positively stated that the circumstances, as she describes them, are true. They are vouched for by facts by J. C. McDonald, Esq., Justice of the Peace, and C. E. B. Pearson, both highly esteemed citizens of Detroit.

Mrs. Shepherd's letter is published in its entirety, and deserves attention.

ELKTON, MICH., May 1, 1892.

To the Editor of the News:

Much as I dislike the notoriety of seeing my name in print, I feel forced to tell the world of the remarkable things that have happened to me.

For fourteen years my life has been one of misery. My nerves were completely shattered, and at times it seemed as though sleep had gone from me forever. For years I did not have one good night's sleep. My appetite was variable and food did not digest. My heart was so weak that at the least noise or excitement it almost stopped beating.

Life had no pleasure for me, and all gloomy forebodings were always present. I was troubled fearfully with fears of death, and I was constantly expecting to die. My eyesight, constituting, trembling, the limbs, and so many other ailments that my pen cannot write them.

I tried many kinds of remedies until I had lost faith in all medicines. When I was the depth of despair I happened to hear of a certain remedy, and I bought it. From that time I heard it was inspired with fresh courage and hope, and I commenced using it. From that time I have been a new man.

Every one in this village knows me, and I am now a healthy, vigorous man. I have been a new man from that time. I have been a new man from that time. I have been a new man from that time.

I hope you will publish this letter, and spread as widely as possible the knowledge of this remedy, which will bring health and happiness to those who are afflicted with similar ailments.

I am, Sir, very respectfully, your obedient servant,

MRS. S. SHEPHERD.

ELKTON, MICH., May 1, 1892.

BREWER LOCALS.

Mr. Willis Chapin, of Massachusetts, is visiting at his former home in Orrin ton.

Mr. D. S. Sargent, of Bangor, is visiting at the schooner Sargent, which is under way to South Brewer.

Mr. E. W. Hodgdon, of Boston, who has been visiting at his former home in this city, leaves to-morrow on his return to the East.

Schooners A. S. Emery and Adeline are at the wharf of the Smith Planing Mill Company taking aboard cargoes of lumber.

Dr. Mitchell and wife, of Bucksport, spent Sunday in this city with Mr. and Mrs. S. W. Royal, being on their way home from Portland.

Mr. and Mrs. J. E. Warren, of Warren, Mass., and family arrived on the steamer Penobscot, Saturday, for a visit to their old home in this city.

May flowers are still quite plentiful and the young people may be seen wearing bouquets of the most fragrant and beautiful of Maine's woodland blossoms.

Life had no pleasure for me, and all gloomy forebodings were always present. I was troubled fearfully with fears of death, and I was constantly expecting to die. My eyesight, constituting, trembling, the limbs, and so many other ailments that my pen cannot write them.

I tried many kinds of remedies until I had lost faith in all medicines. When I was the depth of despair I happened to hear of a certain remedy, and I bought it. From that time I heard it was inspired with fresh courage and hope, and I commenced using it. From that time I have been a new man.

AGRICULTURAL.

Something About Grass Kinds.

A writer in the New England Farmer says: Clay or heavy loam lands are most suitable for grass, and once well seeded will improve and bear heavier crops for years. They can be kept in permanent grass providing they are properly manured. Yet how much mowing land do we see reverting to pastures or ploughed up and cultivated to produce corn, wheat, and then resented to grass at great cost of seed, manure and labor?

Unless the land was improperly laid down and is too uneven to use the mowing machine, tedder and horse rake, it should not be ploughed but kept in grass by the use of the mowing machine.

For the prevention of the apple scab the State experiment station at Geneva began spraying hypodermis of soda, 1 pound to 10 gallons of water. This solution was used also, but was found to injure the foliage and much of the fruit on the trees treated with this fell off. Other experiments were tried with potassium sulphide and calcium sulphide, the latter of which proved of no value. Then modified sodium carbonate solution of copper carbonate, sulphur solution, copper carbonate, suspended in water, and a compound of ammoniated copper sulphate and copper carbonate, known as mixture No. 5, were added to the list of fungicides tested. The ammoniated solution and the modified sodium carbonate solution were the best results of the apple scab.

The treatment averages about 25 cents per tree, while the increase of perfect fruit over the untreated trees ranged from 25 to 75 per cent. In 1896 it was found that the size of pear and one of the three weeks later gave a good result as five or even seven sprayings made at intervals during the summer.

Professor Goff got better results with copper carbonate in suspension than with the ammoniated solution, but the Bordeaux mixture gave better results than either. The best results of all were obtained from four treatments with Paris green, both for apple scab and codling moth. Prof. Craig, of Ottawa, Can., obtained best results by the combination of Paris green and the ammoniated solution of copper carbonate. Prof. Craig found that there was 50 per cent. of a scabby fruit on unsprayed than on sprayed trees and the injury to the foliage by scab was twice as great where trees were not sprayed.—(Prof. S. A. Beach to the Western New York Horticultural society.)

It Takes the Cake

Makes it shorter, richer, and sweeter-flavored than butter, and you use only 9 ounces to a pound of sugar.

The cake keeps fresh longer, and you save from 10 to 15 cents per pound by its use. What is it?

FAIRBANK'S

COOKING FAT

is a new discovery, and the choicest cooking fat known.

For shortening all kinds of bread, cakes, biscuits, rolls, pies, pastries, etc., it is the best.

It has received the highest encomiums from French chefs and skilled teachers of cookery, and it is the most economical and economical of all.

For half a pound of Cotolene will do the work of a pound of lard or butter.

Ask your grocer for it.

Manufactured by N. K. FAIRBANK & CO., CHICAGO, and 5 Central Wharf, Boston.

The Bottom Pickers.

It weighs twelve pounds, is mounted on two wheels, easily drawn by two men, and is driven directly over the row to be picked. The plan is to pick the cotton by a surface of wood, which is made to follow the picking spindles, which bends them so as to follow the machine to the gin.

The whole apparatus can be raised or lowered by the driver in his seat.

The cotton is gathered by spindles, which in series of nine, project from between small cylinders which revolve around a common center. At each revolution of the spindles, the cotton is picked up by the spindles, which are furnished with brush-like surfaces, and are revolved by a gear on the axle with gear rapidly turning the spindles.

The cotton is thrown by centrifugal force into a receptacle at the rear of the machine, having a capacity of about 150 pounds, and made of heavy wire netting fastened around a wooden frame, which allows all the dust and dirt to escape, but retains the fibre. When full, the machine is stopped, and the cotton is removed to a wagon on the field for that purpose. This stoppage occurs about twenty times during the day, and is a great saving of time.

The machine is so constructed that it is a great saving of time, and is a great saving of time.

The machine is so constructed that it is a great saving of time, and is a great saving of time.

The machine is so constructed that it is a great saving of time, and is a great saving of time.

The machine is so constructed that it is a great saving of time, and is a great saving of time.
